

SUDHARSAN S R

Entry-Level Full-Stack Developer | Java | Python

Email: your.email@example.com | Phone: +91-XXXXXXXXXX | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Entry-Level Full-Stack Developer with strong proficiency in Java and Python, solid understanding of Data Structures and Algorithms (DSA), and hands-on experience in full-stack web development. Experienced in building scalable applications, RESTful APIs, database-driven systems, and contributing across the Software Development Life Cycle (SDLC) including design, development, testing, and deployment.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript

Frontend: HTML5, CSS3, React.js, Bootstrap

Backend: Spring Boot, Flask, REST APIs

Databases: MySQL, SQLite, MongoDB

DSA: Arrays, Strings, Linked Lists, Stacks, Queues, HashMaps, Sorting, Searching, Time & Space Complexity

Tools: Git, GitHub, Maven, Postman, IntelliJ IDEA, VS Code

PROJECT EXPERIENCE

FinTrack – Personal Finance Management System

Technologies: Java, Spring Boot, React, MySQL

- Designed and developed a full-stack finance tracking application to manage income, expenses, and monthly budgets.
- Implemented RESTful APIs using Spring Boot for secure CRUD operations.
- Integrated MySQL database with optimized queries and validations.
- Built responsive UI using React and handled state management efficiently.
- Followed MVC architecture and industry-standard coding practices.

Special Lab Management System

Technologies: Python, Flask, SQLite, HTML, CSS

- Developed a web-based laboratory management system to handle test records, reports, and user data.
- Implemented backend logic using Flask and Python with modular architecture.
- Designed normalized database schema and ensured data integrity.
- Improved performance by applying efficient data structures and optimized queries.

Python Data Processing & Analytics Tool

Technologies: Python, Pandas

- Built a data processing application to clean, analyze, and transform structured datasets.
- Used efficient algorithms to handle large datasets and reduce processing time.
- Generated summarized outputs for reporting and analysis.

DATA STRUCTURES & ALGORITHMS EXPERIENCE

- Solved 160+ DSA problems on LeetCode using Java and Python.
- Strong understanding of algorithm optimization, edge case handling, and complexity analysis.
- Regularly applied DSA concepts in real-world project implementations.

SOFTWARE DEVELOPMENT LIFE CYCLE (SDLC)

- Requirement analysis and system design
- Application development and unit testing
- Debugging, optimization, and version control
- Deployment and basic production support

EDUCATION

Bachelor's Degree in [Your Degree]

[Your College / University Name]

DECLARATION
